Shawn,

Per your request, please see attached Corrected Consent Decree. Also, based on the Regional Screening Level (RSL) Summary Table dated November 2010, the following levels are listed for industrial soil levels with the respective Arkwood clean-up levels in parentheses:

Pentachlorophenol – 2.7 mg/kg (300 mg/kg)
Benzo (a) pyrene – 0.21 mg/kg (6 mg/kg)
Dioxin – TCDD 2,3,7,8 – 0.018 ug/kg (20 ug/kg)

The summary table does not specify what risk level is associated with the screening values.

Jean
